

Question 1: Create a Database and Table

Create a PostgreSQL database named **company_db**. Then create an **employees** table with the following requirements:

- `employee_id` → Automatically generated primary key.
- `first_name` → Required, maximum 50 characters.
- `last_name` → Required, maximum 50 characters.
- `phone` → Maximum 20 characters.
- `age` → Must be at least 18.
- `salary` → Must be greater than or equal to 0.

After creating the table, display its structure using a PostgreSQL command.

Question 2: Insert and Retrieve Data

Using the table created in Question 1:

1. Insert the following employees:
 - Ahmed Hassan, 30 years old, phone: 01012345678, salary: 65000
 - Sara Ali, 25 years old, phone: 01198765432, salary: 55000
 - Mariam Mostafa, 35 years old, phone: 01234567890, salary: 72000
 2. Display all records in the table.
 3. Insert another employee and use the `RETURNING *` clause to display the inserted row immediately.
-

Question 3: Database Management and Validation

Perform the following tasks:

1. List all databases in PostgreSQL.
2. Connect to **company_db**.
3. Attempt to insert an employee whose age is **16**. What happens? Explain why.
4. Attempt to insert an employee with a **negative salary**. What happens?
5. Try to drop **company_db** while connected to it. Record the error message, then perform the correct steps to delete the database safely.
